

CRM System — Project Proposal & Requirements Documentation

1. Project Overview

The proposed system is a **Lead Management & CRM Platform** designed to manage leads generated through Meta Ads, automatically distribute leads among employees according to predefined priorities, track employee performance, manage follow-ups, monitor conversions, and maintain complete financial records.

The CRM will provide the **Admin** with centralized control over employees, leads, campaigns, follow-ups, closed deals, expenses, revenue, and employee performance.

Employees will have their own accounts and dashboards where they can view assigned leads, communicate with customers through manual WhatsApp communication, record follow-ups, and update lead status.

The primary objective is to ensure that **no lead is missed, lead distribution is fair and controlled, employee performance is measurable, and management has complete visibility of the sales process.**

2. User Roles

The system will initially contain two major roles:

Admin

The Admin will have complete access to the CRM and will be responsible for:

- Creating and managing employees
- Setting employee priorities
- Managing leads
- Assigning leads
- Monitoring lead distribution
- Monitoring employee performance
- Managing campaigns
- Monitoring follow-ups
- Managing closed leads

- Managing company expenses
- Viewing revenue and profit
- Receiving alerts and reminders
- Disabling or removing employees

Employee

Employees will have restricted access to only the information required for their work.

Employees can:

- Login using their credentials
- View leads assigned to them
- View customer information
- Contact customers manually through WhatsApp
- Record calls
- Record WhatsApp communication
- Add follow-ups
- Add additional follow-ups
- Update lead status
- Add closed leads to the entry module
- View their own performance

Employees **will not be able to view other employees' private lead information or performance data.**

3. Employee Management Module

The Admin will have a dedicated Employee Management section.

Admin can:

- Create employee
- Enter employee name

- Create employee password
- Edit employee information
- Assign employee priority
- Activate employee
- Disable employee
- Remove employee
- Reassign leads
- View employee performance

Employee Priority

The Admin will manually define the priority of each employee.

For example:

Priority Employee

Priority 1 Employee A

Priority 2 Employee B

Priority 3 Employee C

Priority 4 Employee D

The priority will determine the automatic lead distribution system.

4. Meta Ads Lead Integration

The CRM will receive leads generated through Meta Ads.

Whenever a new lead is generated, the lead will enter the CRM automatically.

Each lead should contain information such as:

- Customer Name
- Contact Number
- Email/Gmail, if available

- Advertisement/Campaign
- Lead creation date and time
- Lead source
- Lead status
- Assigned employee
- Follow-up history

Campaign Identification

Every lead will be associated with the relevant:

Meta Campaign / Advertisement Category

For example:

- Property
- Housing scheme
- D 12 Houses
- Flats for Sale
- Product Campaign
- Promotional Campaign

This will allow Admin to determine which campaigns are generating leads and conversions.

5. Lead Distribution System

The CRM will include an automated lead distribution system.

When a new lead enters the system, it will first appear on the **Admin Dashboard**.

The Admin will have the opportunity to manually assign the lead.

Manual Assignment Window

The Admin will have **5 minutes** to manually assign the lead.

If the Admin assigns the lead within 5 minutes:

The lead will be assigned to the selected employee.

If the Admin does not assign the lead within 5 minutes:

The automated employee priority system will take over.

6. Automatic Lead Distribution

The system will automatically distribute leads according to employee priority.

However, the distribution will also follow the defined **8-lead rotation rule**.

Example

Suppose there are three active employees:

- Employee A — Priority 1
- Employee B — Priority 2
- Employee C — Priority 3

The system will distribute leads according to the configured rotation.

After every **8 leads**, the next-priority employee will receive the next lead according to the rotation rules.

The system will maintain an internal lead counter so that distribution remains consistent.

The exact sequence can be configured according to the Admin's priority structure.

7. Lead Acceptance Time

Once a lead is automatically assigned to an employee, the employee will have **10 minutes to accept the lead**.

If employee accepts:

The lead remains assigned to that employee.

If employee does not accept within 10 minutes:

The system will automatically:

1. Remove/reassign the lead from the current employee
2. Send the lead to the next-priority employee
3. Record the reassignment in the system

4. Display a **red flag/alert on the Admin Dashboard**

This will allow the Admin to immediately identify employees who are not accepting leads on time.

Red Flag

The Admin will be able to see information such as:

- Employee name
 - Lead name
 - Time lead was assigned
 - Acceptance deadline
 - Reason/status
 - Number of missed leads
-

8. Admin Lead Dashboard

The Admin Dashboard will provide an overall view of the organization's leads.

The Admin will be able to see:

- Total leads
- New leads
- Assigned leads
- Unassigned leads
- Accepted leads
- Pending leads
- Follow-up leads
- Closed leads
- Lost leads
- Leads by employee
- Leads by campaign

- Leads requiring follow-up
- Leads with no follow-up
- Missed/expired leads
- Red-flagged leads

The dashboard should provide filtering options such as:

- Date
 - Employee
 - Campaign
 - Lead status
 - Lead source
 - Closed/open status
-

9. Lead Information

Each lead will contain a dedicated lead profile.

Basic Information

- Customer Name
- Contact Number
- Email/Gmail
- Campaign
- Lead Source
- Date & Time
- Assigned Employee
- Lead Status

Communication Information

The employee will be able to record:

- Calls made

- Call count
 - WhatsApp messages sent
 - Follow-up messages
 - Follow-up date/time
 - Customer response
 - Lead status
-

10. Follow-Up Management

Follow-up tracking is one of the core features of the CRM.

The initial lead interface will contain **5 follow-up input boxes**.

Employees can enter information regarding each follow-up.

For example:

Follow-Up 1

- Follow-up message
- Call made
- Number of calls
- WhatsApp communication
- Date/time

Follow-Up 2

Same structure.

Up to:

Follow-Up 5

11. Additional Follow-Ups

The system will not restrict the employee to only five follow-ups.

After the initial five follow-ups are used, the employee will have a:

"+ More Follow-Up"

button.

When clicked:

A new follow-up input field will appear.

The employee can continue adding additional follow-ups as required.

Important Restriction

Once a follow-up has been submitted:

It cannot be edited or deleted.

This creates an accurate and tamper-resistant communication history.

12. Follow-Up History

Every follow-up will be stored permanently against the lead.

The system will maintain:

- Follow-up number
- Employee
- Message
- Call information
- WhatsApp communication information
- Date
- Time
- Creation timestamp

This will allow Admin to review the complete history of communication with a customer.

13. Follow-Up Immutability

Once an employee adds a follow-up:

The submitted follow-up becomes read-only.

Employees cannot:

- Edit the follow-up
- Delete the follow-up
- Change the original message
- Remove the communication history

Admin access to historical records will also be controlled to preserve the integrity of the CRM records.

New information should be added through a **new follow-up entry**, rather than modifying an old one.

14. Manual WhatsApp Communication

The CRM will support **manual WhatsApp communication**.

The employee can use the customer's contact number to communicate with the customer through WhatsApp.

The CRM will allow the employee to record the communication manually.

For example:

WhatsApp Message Sent — Customer requested pricing details.

The system will record this activity in the follow-up history.

The CRM is not required to automatically send WhatsApp messages unless a separate WhatsApp Business API integration is added as a future feature.

15. Uncontacted Lead Reminder

The CRM will automatically monitor leads assigned to employees.

If an employee has a lead but does not add a follow-up/communication entry within the defined monitoring period, the Admin will receive a reminder.

The reminder will identify:

- Employee name

- Customer name
- Contact number
- Campaign
- Lead assignment time
- Current lead status

Example:

Reminder: Employee A has not added a follow-up for Customer XYZ.

This will help management identify leads that are being ignored or not properly handled.

16. Lead Status Management

The system should support lead statuses such as:

- New
- Assigned
- Accepted
- Contacted
- Follow-Up
- Interested
- Negotiation
- Closed/Won
- Closed/Lost
- Not Interested
- No Response

The Admin can monitor the movement of leads through these stages.

17. Closed Lead / Entry Module

A dedicated **Entry Module** will be provided for closed leads.

When a lead is successfully converted, the employee will enter the relevant financial and customer information.

Required Fields

- Customer Name
- Contact Number
- Gmail/Email
- Amount Received
- Payable Amount
- Profit

The system can automatically calculate:

Profit = Amount Received – Payable Amount

Where applicable, additional financial fields can be added later.

18. Employee Performance Dashboard

The Admin will have access to an employee performance dashboard.

The Admin can see individual employee performance.

Performance Metrics

- Total assigned leads
- Total accepted leads
- Missed leads
- Total follow-ups
- Total calls
- Total WhatsApp communications recorded
- Total closed clients
- Total revenue generated
- Total payable amount

- Total profit
 - Conversion rate
 - Pending leads
 - Active leads
 - Lost leads
-

19. Employee Progress Tracking

The Admin will be able to monitor employee progress over different periods.

For example:

Daily

- Leads received
- Leads contacted
- Follow-ups added
- Clients closed
- Revenue generated

Weekly

- Total leads
- Total follow-ups
- Total conversions
- Revenue
- Profit

Monthly

- Total leads
- Total customers
- Conversion rate
- Revenue

- Profit
 - Employee ranking
-

20. Employee Ranking

The Admin Dashboard can display employee performance rankings.

Employees can be compared based on:

1. Number of leads handled
2. Follow-ups completed
3. Number of clients closed
4. Revenue generated
5. Profit generated
6. Lead conversion rate
7. Missed leads

This will provide management with a clear understanding of employee productivity.

21. Campaign Management

Every lead received from Meta Ads will be connected to its campaign/ad category.

The Admin will be able to analyze:

- Campaign leads
- Leads by campaign
- Closed leads by campaign
- Revenue by campaign
- Profit by campaign
- Conversion rate by campaign

For example:

Campaign	Leads	Closed	Revenue	Profit
Website	100	15	—	—
SEO	80	12	—	—
App Development	60	10	—	—

This will help identify which Meta campaigns are producing the best business results.

22. Expense Management Module

The CRM will include an Expense Management Module.

The Admin can record company expenses.

Expense Categories

- Office Rent
- Employee Salaries
- Internet
- Electricity
- Water
- Office Bills
- Marketing Expenses
- Software/Subscriptions
- Other Expenses

Each expense can contain:

- Expense title
- Category
- Amount
- Date
- Description

- Added by
 - Supporting note/document, if required
-

23. Financial Dashboard

The Admin will have a financial overview.

The dashboard can display:

- Total revenue
- Total payable amount
- Total profit
- Total expenses
- Net profit
- Employee-wise revenue
- Campaign-wise revenue
- Monthly expenses

Basic Calculation

Gross Profit = Amount Received – Payable Amount

Net Profit = Gross Profit – Business Expenses

24. Admin Alerts & Notifications

The Admin Dashboard will provide important alerts.

Examples:

Lead Assignment Alert

New lead requires assignment.

Missed Acceptance Alert

Employee has not accepted the assigned lead within 10 minutes.

Follow-Up Alert

Employee has not recorded follow-up activity for an assigned lead.

Red Flag Alert

Lead was automatically reassigned because employee did not accept it.

These alerts will help the Admin take immediate action.

25. Lead Audit Trail

The CRM should maintain a complete history of important lead actions.

For every lead, the system should be able to show:

- When lead entered CRM
- Which campaign generated it
- When Admin viewed it
- Who assigned it
- When employee accepted it
- Whether it expired
- Whether it was reassigned
- Follow-up history
- Status changes
- Closed date
- Financial entry

This provides transparency and accountability.

26. Data Privacy & Access Control

Employees will only have access to their own assigned leads and their own CRM information.

Employees should not be able to:

- View another employee's leads

- View another employee's follow-ups
- View another employee's financial performance
- Change another employee's records
- Delete CRM history
- Change submitted follow-ups

The Admin will have the highest level of access.

27. Employee Activation / Deactivation

The Admin can disable an employee whenever required.

When an employee is disabled:

- Login access will be blocked.
- New leads will not be assigned to them.
- Existing active leads can be reassigned by Admin.
- Historical records will remain in the CRM.
- Previous performance data will remain available.

The system should preferably use **deactivation rather than permanent deletion** so historical business records are preserved.

28. Lead Reassignment

The Admin can manually reassign any lead.

For example:

Lead → Employee A

can be changed to:

Lead → Employee B

The reassignment should be recorded in the lead history.

The system should maintain:

- Previous employee
 - New employee
 - Date/time
 - Reassignment reason, if required
-

29. Search & Filtering

The CRM should provide a global search and filtering system.

Admin can search by:

- Customer name
- Phone number
- Email
- Employee
- Campaign
- Lead status
- Date
- Closed status

This will make it easy to find any customer or lead.

30. Admin Dashboard — Main Overview

The Admin's main dashboard should provide a quick overview of the business.

Dashboard Cards

- Total Leads
- Today's Leads
- Pending Leads
- Contacted Leads
- Follow-Up Leads

- Closed Leads
- Lost Leads
- Total Revenue
- Total Profit
- Total Expenses
- Net Profit

Employee Section

- Employee performance
- Lead distribution
- Missed leads
- Follow-ups
- Closed clients
- Revenue

Alert Section

- Unassigned leads
- Expired leads
- Red flags
- Leads without follow-up

31. Employee Dashboard

Employees will have a simplified dashboard.

Dashboard Information

- New assigned leads
- Accepted leads
- Pending follow-ups
- Today's follow-ups

- Closed leads
- Total clients
- Personal revenue
- Personal performance

Employees will only see information related to their own account.

32. Lead Workflow

The complete lead workflow will operate approximately as follows:

Meta Ad

↓

Lead Generated

↓

Lead Enters CRM

↓

Admin Dashboard

↓

Admin Has 5 Minutes to Assign

↓

If Assigned

Employee Receives Lead

↓

Employee Has 10 Minutes to Accept

↓

If Accepted

Lead Becomes Active

↓

Employee Contacts Customer

Follow-Up Added

Additional Follow-Ups When Required

Customer Converted

Closed Lead Entry

Revenue / Payable / Profit Recorded

If Admin Does Not Assign

5-Minute Timer Expires

Automatic Priority Distribution

If Employee Does Not Accept

10-Minute Timer Expires

Lead Automatically Moves to Next Priority Employee

Red Flag Appears on Admin Dashboard

33. Follow-Up Workflow

Employee Opens Lead

↓

Contacts Customer

↓

Adds Follow-Up

↓

Follow-Up Becomes Locked

↓

Customer Requires Another Contact

↓

Click + More Follow-Up

↓

New Follow-Up Field Appears

↓

Employee Adds New Communication

↓

New Follow-Up Becomes Locked

This process continues until the lead is closed, lost, or otherwise completed.

34. Security Requirements

The system should implement appropriate security measures including:

- Secure employee authentication
- Password protection
- Role-based access control
- Admin-only management functions
- Employee data isolation
- Secure API communication

- Database access restrictions
 - Audit logs
 - Protection against unauthorized data modification
 - Automatic session handling
 - Secure password storage
-

35. Important Business Rules

The following rules are mandatory for the CRM:

Rule 1

Admin creates employees manually.

Rule 2

Admin sets employee priorities.

Rule 3

New Meta leads appear in Admin Dashboard.

Rule 4

Admin has 5 minutes to manually assign a new lead.

Rule 5

If Admin does not assign the lead, automatic assignment begins.

Rule 6

Automatic distribution follows the configured employee priority and 8-lead rotation mechanism.

Rule 7

An employee has 10 minutes to accept an automatically assigned lead.

Rule 8

If the employee does not accept within 10 minutes, the lead moves to the next priority employee.

Rule 9

A red flag is shown to Admin whenever a lead expires due to non-acceptance.

Rule 10

Employees can only access their own leads and information.

Rule 11

Employees can manually communicate with customers through WhatsApp.

Rule 12

Employees can record communication/follow-up information in the CRM.

Rule 13

Submitted follow-ups cannot be edited.

Rule 14

Submitted follow-ups cannot be deleted.

Rule 15

Employees can add unlimited additional follow-ups through the "+ More Follow-Up" button.

Rule 16

Admin can monitor employee progress.

Rule 17

Admin can monitor every follow-up associated with a customer.

Rule 18

Closed customers must be entered into the Entry Module.

Rule 19

Financial information will include amount received, payable amount, and profit.

Rule 20

Admin can manage office expenses.

Rule 21

Admin receives reminders for leads without recorded follow-up activity.

Rule 22

Historical CRM records should remain preserved even when an employee is disabled.

36. Proposed CRM Modules

The complete system will consist of the following major modules:

Admin Side

1. Admin Login
2. Admin Dashboard
3. Employee Management
4. Employee Priority Management
5. Lead Management
6. Automatic Lead Distribution
7. Campaign Management
8. Follow-Up Monitoring
9. Lead Alerts
10. Red Flag Management
11. Closed Lead / Entry Module
12. Expense Management
13. Financial Dashboard
14. Employee Performance
15. Reports & Analytics
16. Search & Filters
17. Audit History
18. Settings

Employee Side

1. Employee Login
2. Employee Dashboard

3. My Leads
 4. Lead Details
 5. Customer Information
 6. Manual WhatsApp Access
 7. Call Tracking
 8. Follow-Up Management
 9. Additional Follow-Ups
 10. Lead Status
 11. Closed Lead Entry
 12. Personal Performance
-

37. Reporting & Analytics

The system should provide reports for management.

Lead Reports

- Daily leads
- Weekly leads
- Monthly leads
- Leads by campaign
- Leads by employee
- Lead status report

Employee Reports

- Leads handled
- Follow-ups
- Calls
- Closed clients
- Revenue

- Profit
- Missed leads

Financial Reports

- Revenue
- Payable amount
- Profit
- Expenses
- Net profit

Reports should be filterable by date range.

38. Recommended Technology Architecture

The exact technology stack can be finalized during development, but the proposed architecture can include:

Frontend

- React.js / Next.js
- Responsive dashboard
- Modern CRM interface

Backend

- Node.js
- Express.js / NestJS
- REST API

Database

- PostgreSQL / MySQL

Authentication

- Secure JWT/session-based authentication
- Role-based authorization

Meta Integration

- Meta Lead Ads API / Webhooks

WhatsApp

Phase 1:

- Manual WhatsApp communication
- Click-to-WhatsApp functionality
- Communication logging

Future phase:

- WhatsApp Business API integration
 - Automated messaging
 - Templates
 - Message delivery tracking
-

39. Responsive Design

The CRM should be responsive and usable on:

- Desktop
- Laptop
- Tablet
- Mobile

The Admin Dashboard may prioritize desktop usage because of the amount of information displayed, while employee functionality should be optimized for both desktop and mobile.

40. Future Scalability

The system should be developed with scalability in mind.

Future features can include:

- WhatsApp Business API

- Automated WhatsApp messages
- Email integration
- SMS integration
- AI lead scoring
- AI-based lead prioritization
- Advanced sales pipeline
- Customer segmentation
- Automated reminders
- Team-based permissions
- Multiple Admin accounts
- Export to Excel/CSV
- PDF reports
- Advanced analytics
- Meta campaign performance integration
- Call recording/integration
- Payment integration

41. Project Objective

The primary objective of the CRM is to create a centralized platform where management can control and monitor the complete lead-to-sale process.

The system will eliminate the need for manual spreadsheets and scattered communication records by providing:

Lead Generation → Lead Assignment → Lead Acceptance → Customer Communication → Follow-Up → Conversion → Financial Entry → Performance Analysis

in one centralized platform.

42. Expected Business Benefits

The CRM will help the organization:

- Reduce missed leads
- Improve response time
- Automatically distribute leads
- Monitor employee performance
- Track every customer interaction
- Prevent modification of historical follow-ups
- Identify inactive employees
- Track campaign performance
- Monitor revenue
- Monitor expenses
- Calculate profit
- Improve sales accountability
- Maintain complete customer history
- Make management decisions using real-time data

43. Final Scope Summary

The proposed CRM will be a complete **Lead Management, Employee Performance, Follow-Up, Sales & Financial Management System**.

The core system will include:

Employee Management

→ Admin creates, manages, prioritizes, disables and removes employees.

Meta Lead Integration

→ Leads automatically enter the CRM from Meta Ads.

Smart Lead Distribution

→ Admin receives the lead first, with a 5-minute manual assignment window.

Priority-Based Distribution

→ Leads are automatically distributed according to Admin-defined employee priority and the 8-lead rotation mechanism.

10-Minute Acceptance System

→ Employees have 10 minutes to accept assigned leads.

Automatic Reassignment

→ Unaccepted leads move to the next priority employee.

Red Flag System

→ Admin is alerted whenever an employee fails to accept a lead within the required time.

Complete Follow-Up Tracking

→ Every customer interaction is recorded.

Immutable Follow-Ups

→ Once submitted, follow-ups cannot be edited or deleted.

Unlimited Follow-Ups

→ Employees can add additional follow-ups using the "+ More Follow-Up" feature.

Manual WhatsApp

→ Employees can communicate with customers manually and record the communication in the CRM.

Closed Lead Entry

→ Employees record customer, contact, received amount, payable amount and profit information.

Employee Performance

→ Admin can monitor leads, follow-ups, conversions, revenue and profit.

Campaign Tracking

→ Leads are categorized according to their Meta campaign/ad source.

Expense Management

→ Rent, salaries, internet, electricity, water and other business expenses can be recorded.

Financial Management

→ Revenue, payable amount, profit, expenses and net profit can be monitored.

Admin Monitoring

→ Management receives reminders and alerts for inactive/uncontacted leads and missed lead acceptance.

The final system will provide management with a **single centralized platform for controlling leads, employees, sales activities, customer follow-ups, campaign performance and company finances.**

This is structured as a **requirements + scope document**, so it can also be used as the foundation for a quotation/SOW. If you're sending it to a client, the next useful step would be adding **project cost, development timeline, payment milestones, hosting/domain costs, Meta API costs, and post-launch support terms.**
